POLYTECH

Health & Aesthetics

POLYTECH Health & Aesthetics GmbH is the leading German manufacturer of soft-tissue implants. The company was founded in 1986 and since has developed a broad range of products for plastic and reconstructive surgery.

The production sites are located at the company headquarters in Dieburg, near Frankfurt/Main. For maximum quality and efficiency, research and development, manufacturing, sterilisation and quality control are effected at that same location.

POLYTECH Health & Aesthetics GmbH offers to surgeons a broad range of implants for body contour correction. The standard programme includes mammary, facial, pectoral, gluteal, testicular and calf implants as well as a wide choice of expanders. Custom-made implants complement this ample portfolio.

Devices and instruments for liposuction, pigmentation and dermabrasion plus compression bustiers and products for scar treatment complete a product range specialised in plastic and reconstructive surgery.

POLYTECH Health & Aesthetics GmbH makes silicone-gel filled mammary implants their priority as these have been proven to be the optimum soft-tissue replacement.

POLYTECH Health & Aesthetics standard products are **Microthane® (micropolyurethane foam)**-coated implants and implants with the **POLYtxt®** textured shell. Medical studies have given evidence that implants coated with micropolyurethane foam show a reduced tendency to cause capsular contracture. The particularly high efficiency of the micropolyurethane surface has been documented in numerous medical studies and publications.

POLYTECH Health & Aesthetics GmbH has applied and certified a quality management system based on the standards EN ISO 9001 and EN ISO 13485 since 1995. Regarding raw material selection, product development, manufacturing, sterilisation, quality control, storage, sales and customer service, all specifications exacted from a certified company are met and continually verified.

All our products feature the CE mark. This means, they fulfill all standards required for medical devices in Europe since 1 January 1995.

POLYTECH Health & Aesthetics GmbH excels in providing first-rate service and high-quality products.

Breast Implants

The POLYTECH Implant Surfaces

Microthane®

An implant-shell coating of medical-grade micropolyurethane foam. This surface is known for its reliability and has been proven to contribute to a reduction of capsular contracture rates¹.

POLYtxt®

A textured implant-shell surface.

MESMO®

A soft-textured implant-shell surface.

smooth

A smooth implant-shell surface.

On the following pages, the above colors for the respective surfaces are shown with the respective products so you will see immediately which product is available with the surface you are looking for.

1: (Handel, 1991; Gasperoni, 1992; Pennisi, 1990; Shapiro, 1989; Baudelot, 1989; Artz, 1988; Hermann, 1984; Eyssen, 1984; Schatten, 1984; Hester et.al., 2001; Vázquez, 2007) (Handel, 2006)

Breast Implants with POLYtxt® surface

this surface is known for its reliability and has been proven to contribute to a reduction of capsular contracture rates. Textured-implant contracture rates are 8–15% (Iwuagwu + Frame, 1997), which is 15% less than with smooth implants (Handel, 2006).

Diagon\Gel®

The POLYTECH Diagon\Gel® 4Two Series

Surface Type POLYtxt®	Base Style	Projection		
		moderate M	high H	extra high X
4Two RR round base, regular profile		21621	21622	
4Two AR round base, anatomical profile			21631	21632
4Two AO short base, anatomical profile			21641	231642

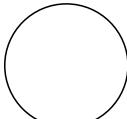

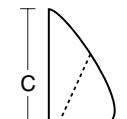

The POLYTECH Health & Aesthetics Diagon\Gel® 4Two implants are filled with two highly cross-linked, cohesive, formstable clear gels: the softer EasyFit Gel at the back and the firmer Shapar Gel at the front.

The softer gel at the back of the implant ensures that the implant molds smoothly to the rib cage and provides for a natural movement of the breast. The firmer gel at the front and the dome-shaped projection facilitate nipple positioning and support the residual breast tissue in push-up style.

Breast Implants with Microthane® coating

The most common complication of breast-implant surgery is capsular contracture. Implants coated with Microthane® (micropolyurethane foam) have been developed to minimize the capsular contracture rate, as well reduce implant dislocation and rotation.

In extensive clinical studies over the past twenty years reviewing large numbers of patients, the capsular contracture rates (Baker classification III–IV) have been determined.

The capsular contracture rate for Microthane®-coated implants in virgin tissue is 0–9 % compared to 9–50 % for other implants. In most of the large studies, the capsular contracture rate for Microthane®-coated implants is as low as 0–3 % (Handel, 1991; Pennisi, 1990; Shapiro, 1989; Hester et al., 2001; Baudelot, 1989; Gasperoni, 1992; Hermann, 1984; Eyssen, 1984; Schatten, 1984; Artz, 1988; Vázquez, 2007).

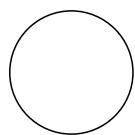

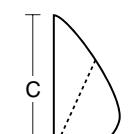

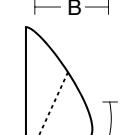

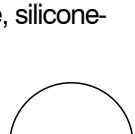

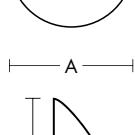

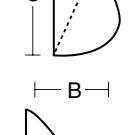

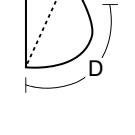

Diagon\Gel®

The POLYTECH Diagon\Gel® 4Two Series

Surface Type Microthane®	Base Style	Projection		
		moderate M	high H	extra high X
4Two RR round base, regular profile		31621	31622	
4Two AR round base, anatomical profile			31631	31632
4Two AO short base, anatomical profile			31641	31642

The POLYTECH Health & Aesthetics Diagon\Gel® 4Two implants are filled with two highly cross-linked, cohesive, formstable clear gels: the softer EasyFit Gel at the back and the firmer Shapar Gel at the front.

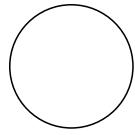

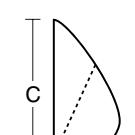

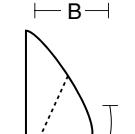

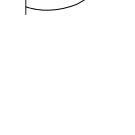

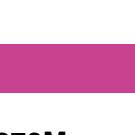

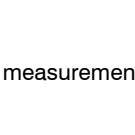

The softer gel at the back of the implant ensures that the implant molds smoothly to the rib cage and provides for a natural movement of the breast. The firmer gel at the front and the dome-shaped projection facilitate nipple positioning and support the residual breast tissue in push-up style.

* Pectoral implants with a smooth surface will be manufactured on demand. To order, replace the first two digits of the order n° with 10, e.g. 10500-230R for a smooth implant with 231g for the right thorax.

Custom-Made Products

If you need implants or expanders with individual specifications, we will manufacture these custom-made on demand.

Benefit from our long experience to provide the best care to your patients!

Please consider the following issues when planning a custom-made implant.

What we need from you:

- a moulage, the exact dimensions or shape and weight of the required product
- specification of the product surface (Microthane®-coated, textured, smooth)
- specification of the filler material (cohesive silicone gel or highly polymerised silicone)
- specification of the consistency / firmness of the filling
- concerning expanders: specification of the required valve type and size (integrated magnetic valve or remote valve, Ø 11 or 17mm)

What you get from us:

- qualified assistance during the development of your custom-made implant or expander
- order forms listing in detail the optional product specifications
- on demand: samples of existing implants for you to choose the desired consistency and rigidity
- free moulage kits
- delivery period: 8 to 10 weeks
- pricing calculated on a time and material basis
- product quality in accordance with the Medical Device Directive

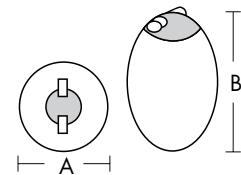

In advance, you will get an order confirmation giving you the exact price and the scheduled delivery date of your custom-made implant.

Expanders

- ▶ Breast Expanders
- ▶ Tissue Expanders

Order n°	Specifications
Magnet Finder for Expanders with integrated valve	
	individually packed, unsterile, (re)sterilisable, CE
20738-010	

IMPORTANT INFORMATION:

All expanders with remote valve are delivered with a large (\varnothing ca. 17mm) and a small (\varnothing ca. 11mm) valve.

All expanders with integrated valve are delivered with a magnet finder. Additional magnet finders can be ordered separately (order n° 20738-010).

All integrated valves are equipped with a permanent magnet.

WARNING: expanders with integrated magnets are not eligible for patients having pace-makers or patients who need an MRI examination during the implantation period.

P53

- * On demand, you can also get the Même® expander with an integrated valve
To order, replace the first two digits of the order n° with 40, e.g. 40627-400
for a Même® expander with a maximum volume of 400ml and an integrated valve.

SurgiMend®	
Collagen Matrix for Soft-Tissue Reconstruction	
Order n°	Specification
SurgiMend® PRS* CE 0344	
606-004-100	Semi-Oval ① 10 x 15 cm, perforated
606-004-101	Rectangle 7 x 17 cm, perforated
606-004-102	Rectangle 10 x 20 cm, perforated
SurgiMend® 1.0* CE 0344	
606-001-012	Square 3 x 3 cm, non-perforated
606-001-015	Rectangle 6 x 16 cm, non-perforated
606-001-018	Rectangle 8 x 16 cm, non-perforated

*Thickness: 1mm

Characteristics and Advantages

- Biological, acellular collagen matrix derived from fetal bovine dermis, especially developed for reconstruction
- Rich in type-III collagen, the active type of collagen, which is naturally found in healing or developing tissue
- Biocompatible and cellcompatible, without artificial chemical cross-linkage
- Inflammation-free healing, fast revascularization, complete integraton in host tissue
- Completely sterilized
- Available in various forms and sizes with an approximate thickness of 1mm
- Simple handling, short preparation time: rehydration in saline solution within ca. 60sec
- Storage at room temperature (shelf life 3 years)

* If the order number is listed with a G in brackets, e.g. 43-6-150 (G), it means the respective canula is available with sharp and blunt openings. If the order number is listed with the G directly connected to the numbers, e.g. 43-3-400G, it means the respective canula is available only with blunt openings. If the order number does not show a G in brackets, e.g. 44-6-200, it means the respective canula is available only with sharp openings.
