Breast Reconstruction - Tissue Expanders	33
Silimed Product Replacement Program	35

The BIODESIGN™ collection from Silimed.

A line of mammary implants and tissue expanders helping the physician to plan and develop a customised result for the biotype of the patient.

INFORMATION

All Silimed Breast Implants and Tissue expanders are latex free. This is described in the product information package which comes with all implants.

Every Silimed implant has a brand and size embossed on the implant making it easy to identify at any time. Silimed is the only manufacturer with a serial number on each implant for complete traceability.

This catalogue has been developed especially for the Australasian market to help you choose and learn about our range of breast implants and breast tissue expanders.

- The dimensions and volumes described in the following tables are approximate values.
- The silicone inside our implants may vary in colour from opaque grey to translucent yellow.
- Please read the Instructions for Use (IFU) in the packaging accompanying the product before use.

Silimed has operated in the market since 1978 serving the plastic surgery community with the manufacturing & distribution of products of the highest quality to satisfy a broad range of needs. In order to achieve this we have developed the best possible partnerships in technology development, raw material supplies, regulatory bodies, universities and surgeons.

As a result of this work we are renowned worldwide and operate in over 70 countries, in 5 continents. We comply with all formal requirements of each Ministry of Health in the countries where Silimed has partners. We are ISO-9001-2000 & EN13485:2003 certified, have GMP from ANVISA (Brazil) and GMP from the FDA. Our products bear the CE mark and are listed on the ARTG in Australia and in New Zealand on WAND with the Ministry of Health.

As constant improvement moves us forward we are always looking at growing market demands and investing heavily in the development of state-of-the-art products to meet patients and surgeon's needs.

SILIMED BREAST IMPLANT COLLECTION

- **P-URE Polyurethane gel-filled anatomical and round mammary implants**
- **Textured gel-filled anatomical and round mammary implants**
- **Tissue expanders anatomical and round for the breast**

The BIODESIGN™ Collection of mammary implants represents the sum of our experience with the modern and sophisticated needs of an ever demanding market. The innovation represented by this line is the variety of shapes in the base and profile with four different projections for each model, resulting in the right choice of implant for the patient. BIODESIGN™ is a line of mammary implants which helps the physician to plan and develop a customised result for the biotype of the patient.

In addition to the broad range of shapes and dimensions, our implants all contain the high performance BIODESIGN™ gel that is an integral part of this new line. The range includes a flat, malleable base that adapts to the thoracic wall and maintains the projection described in the catalogue, as well as a more tapered and flexible edge, which is less palpable and visible. Since the base is flat, the implants are filled with more gel (of great elasticity and memory) with the result that there is a reduced tendency to deform after implantation, leaving the breasts perfectly natural.

We provide sterilisable gel sizers for fine tuning during surgery. We recommend that during the operation the physician uses the sizer equivalent to the implant ordered, to confirm or correct his/her original choice.

We have added the D measurement (otherwise known as the Lower Ventral Curvature) to our tables, which measures from the base to the peak projection of the implant. There is a coloured marking spot, to guide the physician to the desired position in relation to the nipple-areola-complex making the choice of implant even easier. The use of this measurement is entirely the physicians choice.

In addition there are markers on the base of the implant to allow for perfect tactile positioning. All the anatomical implants are also marked with a vertical line that runs from the inferior edge to the peak of the implant to ensure proper vertical alignment.

In short, Silimed's intention is to arm you with a larger number of tools, but always respecting your expertise in their use.

Textured implant & the corresponding sterilisable sizer.

IMPLANT FEATURES & TECHNOLOGY

P-URE POLYURETHANE FOAM COATED BREAST IMPLANTS

Magnified image of the Polyurethane surface matrix

One of the physician's main objectives while planning surgery, be it aesthetic or reconstructive, is to minimize the possibility of capsular contracture, rotation or downward displacement.

With this in mind, the BIODESIGN™ polyurethane foam coated mammary implants provide significant advantages compared to other types of implants. Over the last twenty years, several peer reviewed scientific studies have been published with a large number of patients that point towards very low rates of capsular contracture, which, in some studies, amounts to around only 1-2% after 15 years of implantation.

These low rates with longer term effects are attributed to the micro-encapsulation of the fibroblasts on the polyurethane foam matrix. Due to this active scarring process, instead of a single linear capsule with great contractile ability (as occurs around textured and smooth implants) what is observed is the formation of micro capsules around each polyurethane strut, thus neutralising the contraction vectors. As a consequence, the occurrence of capsular contracture is drastically reduced. Another major benefit of the polyurethane foam is its ability to adhere to the surrounding tissues, reducing the occurrence of displacement or rotation of the implant to a negligible value.

These unique characteristics of the polyurethane foam, combined with the gel of great elasticity and memory, result in breasts which are natural and soft to the touch with the minimum risk of capsular contracture. Confidence in product performance is reflected in our product replacement program.

Smooth Implant Capsule

Microscopic view of scar tissue capsule surrounding a smooth breast implant: collagen arrayed in parallel linear fashion.

Textured Implant Capsule

Microscopic view of scar tissue capsule surrounding a mechanically textured breast implant: in spite of surface texturing, collagen is deposited in parallel linear fashion.

Polyurethane Implant Capsule

Microscopic view of scar tissue capsule surrounding a poly-urethane coated breast implant.

BIODESIGN™ GEL

Silimed gel, with its high-cohesiveness and low bleed properties has been used for many years to meet the specific needs of each part of the human body, varying in their physical characteristics according to the area of use.

Our BIODESIGN™ gel can faithfully reproduce a soft tissue to give the implant a better fit and provide a softer touch moulding to the body whilst improving its appearance. It also helps to preserve its natural look, memory and elasticity properties providing a stable shape with minimal deformation.

The BIODESIGN™ gel consistency or hardness is measured by an instrument (Penetrometer) that calculates the penetration of the gel. A number is assigned for each gels consistency or hardness and corresponds to the depth of penetration of the gel.

BIODESIGN™ gel's high cohesiveness contributes towards less gel transudation. This property is responsible for keeping the molecules connected by not letting the gel "run" if the implant happens to rupture. It denotes elongation and memory, and should not be confused with hardness.

PRODUCT REPLACEMENT PROGRAM

Silimed Product Replacement Program (SPRP) for Polyurethane implants.

SILIMED offers a program of lifetime coverage. In the event of the Polyurethane implant envelope rupturing, a new SILIMED Polyurethane implant will be made available to the surgeon through Device Technologies.

Silimed also offers the replacement for ten years in the case of capsular contracture (Baker grade III or IV), rotation and implant displacement.

The surgery has to be performed by a qualified surgeon in accordance with the instructions for use of SILIMED implants and following current surgical techniques. This program does not cover the costs of the surgery and hospital costs associated with the replacement, it only offers to replace the Polyurethane implant.

After the operation, the patient needs to fill out the personal registration form at our website www.silimed.com.br. They will receive a message confirming their registration in the form of a printable personal registration card, which should always be carried by the patient.

Once a year the patient will be asked to fill out an updated registration on our site. This renewed register will contain some easy questions for them to answer regarding their satisfaction and well-being. On filling out the update, the patients SPRP will be extended for another year. The program will only be continued after we receive each year the renewed registration duly filled out.

The SPRP does not cover a new SILIMED Polyurethane implant in the following cases:

- Capsular contracture Baker grade I or II.
- The SPRP is only valid if the SILIMED Polyurethane Implant was placed in virgin tissue (no capsular or scar tissue).

- The SPRP is only valid if postoperatively wound healing was inconspicuous with cell integration into the Polyurethane foam.
- The SPRP is not valid in relation to surgical complications such as hematoma, seroma or infections.
- The capsular contracture Baker grade III or IV must be documented with MRI by the surgeon before the implant exchange.

SILIMED operates the SPRP voluntarily and reserves the right to cancel or modify it at any time. The program is only valid in countries to which SILIMED supplies its products.

Manufacturing facility.

Measuring shell thickness.

Removing air bubbles.

Silimed Product Replacement Program (SPRP) for Gel filled implants.

SILIMED offers a program of lifetime coverage in the event of the implant envelope rupturing. A new SILIMED breast implant will be made available to the surgeon through Device Technologies.

The surgery has to be performed by a qualified surgeon in accordance with the instructions for use of SILIMED implants and following current surgical techniques. This program does not cover the costs of the surgery and hospital costs associated with the replacement; it only offers to replace the Gel Filled implant.

After the operation, the patient needs to fill out the personal registration form at our website www.silimed.com.br. They will receive a message confirming their registration so in the form of a printable personal registration card, which should always be carried by the patient.

Once a year the patient will be asked to fill out an updated registration on our site. This renewed register will contain some easy questions for them to answer regarding their satisfaction and well-being. On filling out the update, the patients SPRP will be extended for another year. The program will only be continued after we receive each year the renewed registration duly filled out.

The SPRP does not cover a new silicone-gel breast implant in the following cases:

- Damage to the implant before or during implantation;
- Damage to the implant due to trauma;
- Damage to the implant during mammography;
- Damage to the implant during open or closed capsulotomy;
- Damage caused during surgical intervention.
- SILIMED operates the SPRP voluntarily and reserves the right to cancel or modify it at any time. The program is only valid in countries to which SILIMED supplies its products.
